Workspace management
as a service

Everyday computing should be as flexible as your organization requires, where people can simply be more productive wherever they are.

worXpace gives you the next level application experience your organization needs, with modern cloud-based management, efficient application delivery and solid security.

worXpace

Be more productive

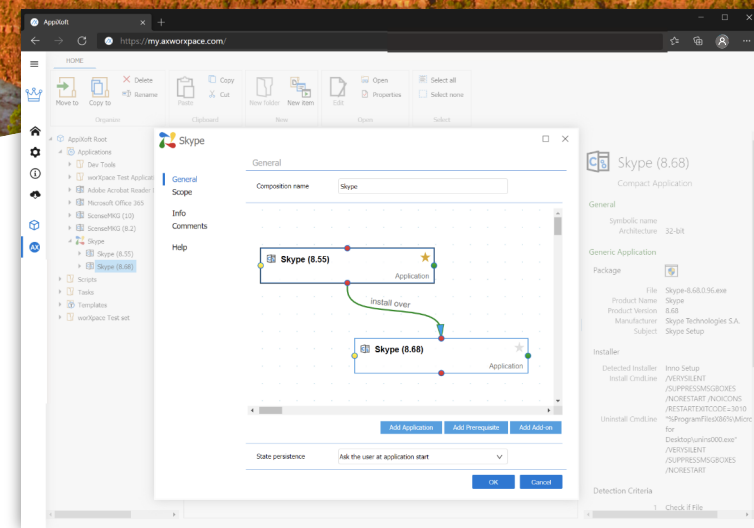

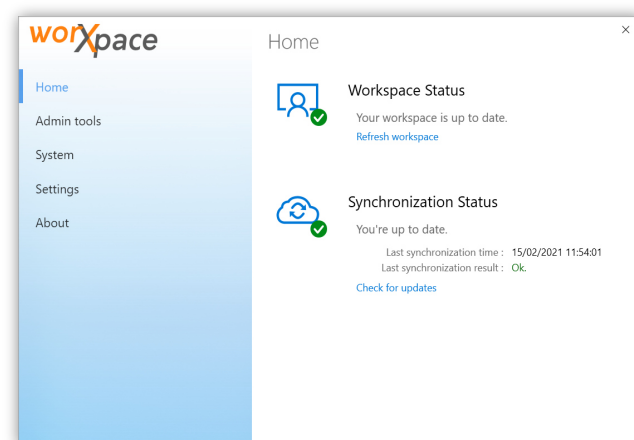

Whether you are serving thousands of users or run a more modest IT environment, **workXpace** offers you the tools capable of handling virtually any challenge. You can compose your user workspaces in great detail and offer your users a personal and productive working experience.

workXpace fully supports Windows Installer and Microsoft App-V applications and offers great tools for generically installed applications, making it very easy for workspace admins to deploy applications in seconds.

Application packages are deployed from high performance cloud storage ensuring smooth application delivery anywhere in the world.

workXpace works seamlessly with your Azure AD and any Windows 10 or Windows 11 computer, including the virtual ones, anywhere in the world.

The **workXpace** agent needs no configuration and automatically connects to your workspace definitions in the cloud.

The graphical Application Composition facilitates a simple and clear application prerequisite, add-on and upgrade design that specifies how the application should be installed or upgraded and serves as a selfexplanatory graph that shows how it operates at-a-glance.

workXpace comes with an extensive set of events, actions, conditions, and variables that will help you build and manage your IT workspaces to the finest detail. The DesktopBridge will allow workspace admins to conveniently – but securely – browse for files, folders, and registry objects from the browser as if they were using locally installed management tooling. This all contributes to great productivity when managing workspaces.

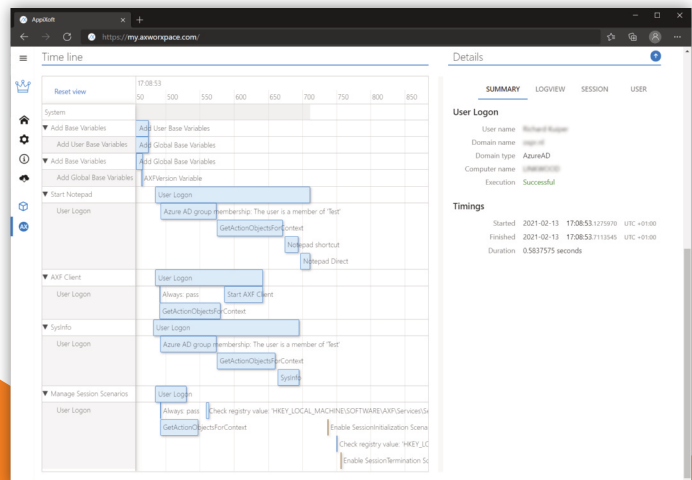

workXpace

Through a high performance communications technology, commonly used with online multi-player games, **workXpace** offers realtime management where workspace admins can address situations in real time which contributes to a high-level user experience.

The **workXpace** runtime system is highly optimized and will use the available processors efficiently to run tasks in parallel whenever possible. To give good insight in parallel processing **workXpace** lets you conveniently review the sessions in timelines as well as detailed log views.

If you want to learn more about **workXspace** or see a demo, please contact us.

About Appixoft

Through our high-end User Workspace Management solutions, we deliver dynamic applications in a personalized workspace to many thousands of satisfied users worldwide. **worXspace** plays a strategic role in delivering functionality and real-time access to the right persons, in time, wherever they happen to be.
