

Exceeding expectations in cloud workspace management

Many years after launching their on-premises workspace management suite **scense**, and building on their experience in delivering dynamic applications in personalized workspaces gathered ever since, AppiXoft have recently introduced a cloud-based workspace management solution: worXpace.

With worXpace, both IT administrators and service providers around the world can now design and operate IT environments from a single management interface and with unprecedented flexibility.

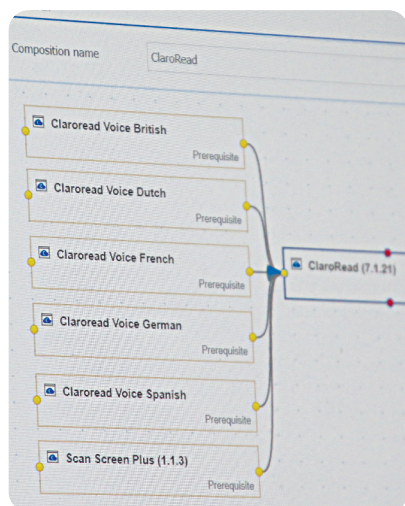

Application management at its finest

WorXpace truly assists the IT admin in delivering applications. For new applications, worXpace does the heavy lifting by analyzing and preconfiguring the application packages. And in complex application scenarios, the graphic application-composition provides clarity.

Cloud and On-Premises

WorXpace is a cloud solution that works perfectly with AzureAD. But support for traditional Windows Active Directory is just as strong, making worXpace perfect for hybrid environments and cloud transitions.

Personalized use

WorXpace comes with next level application- and user experience, hassle-free cloud-based management, smooth application delivery and solid security.

WorXpace offers the tools to handle virtually any deployment challenge, whether you are serving thousands of users or running a more modest IT environment. And for use on both company-owned devices or in BYOD scenarios.

What's more, worXpace is designed for IT admins who like to treat employees as people rather than mere computer users. People with unique wishes, skills and quirks who know very well when and where they are most productive.

Application lifecycle management

For that reason it is crucial to give people exactly what they need to do their job in such a way that it does not interfere with their personal workflow, creativity and familiar workspace.

WorXpace is making great strides in application lifecycle management. Not only the introduction of new applications, but also their delivery, their usage and the inevitable discontinuation or upgrade to newer versions becomes a breeze.

By 'understanding' the application packages and then automatically pre-configuring them, worXpace relieves administrators of tedious but important research in the process of deploying new applications or updates.

No client configuration required

The interaction between the client software and cloud service is designed to balance a maximum user experience with a responsive cloud back-end. The cloud back-end relieves admins from retaining server hardware and software, as well as licenses and maintenance that go with it.

Automatic updates of the worXpace components enable trouble-free management of the worXpace client software.

To further relieve IT admins, the worXpace agent needs no configuration and automatically connects to any workspace definitions in the cloud.

WorXpace works seamlessly with Active Directory, Azure AD and any Windows 10 or 11 computer, including virtual devices.

Tailored for use by service providers

Additional productivity tools enable IT-admins to build and manage IT workspaces to the finest detail. This includes the 'desktop bridge' that enables worXpace admins to browse for local files, folders, and registry objects from their web browser as if they were using locally installed management tooling.

Thanks to worXpace's flexible multi-tenant implementation, service providers in turn can serve multiple customers from a single management system, operating with one or multiple subscriptions. They can either completely unburden customers with a full-service strategy or have a lighter touch by coaching customers while they do most of the work themselves.

About Appixoft

Through our high-end User Workspace Management solutions, we deliver dynamic applications in a personalized workspace to many thousands of satisfied users worldwide. worXpace plays a strategic role in delivering functionality and real-time access to the right persons, in time, wherever they happen to be. By doing so, we enable organizations to deliver business-critical applications and information quickly and efficiently. We work towards the ultimate productivity and user experience for both end users and administrators. And with a great sense of honesty: Appixoft provides, worXpace delivers!
